

Keybindings Cheatsheet – Every App on This Machine

One page per tool, the way the keys actually fire on **Rocky Linux 10 / GNOME 49 Wayland**. The companion PDF ([assets/keybindings-cheatsheet.pdf](#)) is built from this same file.

Legend – **C** = Ctrl · **S** = Shift · **A** = Alt · **Super** = Windows key · **C+S** = Ctrl+Shift · **LEADER** = WezTerm

leader (Ctrl+A, 1 s window) · → key = press, release, then the next key (modal / prefix).

Source of truth – each table is extracted from the live config it names. Where two scripts disagree, the divergence is flagged in § Conflict & precedence logic.

0. The five keys to know first

Key	Action	Layer
Super + Space	App launcher (rofi)	GNOME
C+S + D / C+S + E	Split pane H / V	WezTerm
C+S + H/J/K/L	Move between panes	WezTerm
Ctrl + A	Multiplexer prefix / WezTerm leader	WezTerm → Zellij → tmux
Space (in nvim)	Editor leader	Neovim

1. GNOME – launch & custom shortcuts

Set by `setup/gnome-desktop-setup.sh` (gsettings custom-keybindings) and `setup/setup-rofi-keybind.sh`.

Key	Action	Bound by
Super + Space	Rofi app launcher (drun)	setup-rofi-keybind.sh → <Super>space
Super + T	Terminal (ptysis)	gnome-desktop-setup.sh custom0
Super + E	Files (Nautilus)	custom1
Super + B	Browser (Brave)	custom2
Super + C	VS Code (Flatpak)	custom3

Divergence flag: the older `md files/KEYBOARD-SHORTCUTS.md` (driven by a `run_onchange_after_gnome-launcher.sh` rofi-menu scheme) lists Ctrl+Space launcher, Super+Return terminal, Super+ SSH menu, Super+. emoji, Super+= calc, Super+Escape power, Super+Shift+V clipboard. Those apply only if that launcher script ran. The table above is what the **current** setup scripts write. Pick one scheme per host – see § Conflict logic.

2. GNOME – window management

`setup/gnome-desktop-setup.sh` →
`org.gnome.desktop.wm.keybindings`.

Key	Action
Super + Q	Close window
Super + Up	Toggle maximize
Super + Down	Minimize
Super + Left / Right	Snap left / right half *(Tiling Assistant; conflicts with PaperWM – see §logic)*
Alt + Tab	Switch windows *(replaced by AATWS)*
Super + Tab	Switch applications *(AATWS)*
Alt + F7 / F8	Move / resize window (keyboard)
Alt + Space	Window menu · Alt + F4 close

3. GNOME – workspaces & monitors

Key	Action
Super + [/]	Prev / next workspace
Super + Shift + [/]	Move window to prev / next workspace
Super + Home / End	First / last workspace
Ctrl + Alt + Up / Down	Workspace up / down
Super + Shift + +/-/↑/↓	Move window to monitor in that direction
Super + P	Switch display mode
Super + 1..9	Focus pinned/open app N (Dash to Panel)
Super + Ctrl + 1..9	New window of app N

4. GNOME – system & screenshots

Key	Action
Super + A	Show all applications
Super + V / Super + M	Message tray / notifications
Super + S	Quick settings · Super + N focus notification
Super + L	Lock screen · Ctrl+Alt+Del log out
Print	Screenshot UI · Shift+Print full · Alt+Print window
Ctrl + Shift + Alt + R	Screen recording
Alt + F2	Run dialog

5. Tiling & switcher extensions

Installed by `setup/install-tiling.sh`,
`setup/gnome-taskbar.sh`, `setup/install-hover-taskbar.sh`.
Log out + back in after install (Wayland can't hot-reload the shell).

PaperWM – scrollable tiling (niri-like)

[paperwm@paperwm.github.com](https://paperwm.github.com)

Key	Action
Super + Left / Right	Focus column left / right (scroll the strip)
Super + Up / Down	Focus window within a column
Super + Shift + Left / Right	Move focused window between columns
Super + Return	New window in the current column
gnome-extensions prefs paperwm@paperwm.github.com	Configure

AATWS – Advanced Alt-Tab Window Switcher

[advanced-alt-tab@G-dH.github.com](https://github.com/G-dH/advanced-alt-tab)

Key	Action
Alt + Tab	Switch window start typing filter
Super + Tab	Switch apps
gnome-extensions prefs advanced-alt-tab@G-dH.github.com	Configure

Tiling Assistant [tiling-assistant@leleat-on-github](https://github.com/leleat-on-github/tiling-assistant)

Key	Action
Super + Up	Maximize / restore
Super + Left / Right	Tile to left / right half
Super + Down	Tile bottom / un-tile
Drag to edge / corner	Tile half / quarter
After tiling	Popup offers other windows to fill the rest

Dash to Panel [dash-to-panel@jderose9.github.com](https://github.com/jderose9/dash-to-panel) (hover-reveal taskbar)

Intellihide on, pressure off – panel reveals on plain **hover** over the top edge.

Action	Effect
Super + 1..9	Focus open window N in the panel
Super + Ctrl + 1..9	New window of app N
Hover top edge	Reveal hidden panel
Middle-click icon	New window of that app
Right-click panel	Dash to Panel settings

Other panel extensions (CopyQ clipboard, AppIndicator tray, Caffeine, Media Controls, Just Perfection) are **click-only** / **GUI** – no default keybindings.

6. WezTerm – direct bindings

From `chezmoi/dot_wezterm.lua`. These fire without the leader.

Panes

Key	Action
C+S + D / C+S + E	Split horizontal / vertical
C+S + H/J/K/L	Focus pane left / down / up / right
C+S+A + H/J/K/L	Resize pane (Left/Right ±5, Up/Down ±3)
C+S + Enter	Toggle pane zoom
C+S + X	Close pane (no confirm)

Tabs & windows

Key	Action
C+S + T / C+S + W	New / close tab
Ctrl + Tab / C+S + Tab	Next / previous tab
Alt + 1..9	Jump to tab 1-9
Super + ←/→	Snap window left / right (mirrors GNOME)
Super + ↑ / Super + ↓	Maximize / restore window
Super + Return	Toggle native fullscreen
Super + H	Hide window
F11	Toggle fullscreen (borderless)

Copy, font, scroll, search

Key	Action
C+S + C / C+S + V	Copy / paste clipboard
C+S + F	Search scrollbar
Ctrl + = / Ctrl + - / Ctrl + 0	Font bigger / smaller / reset
C+S + PageUp / PageDown	Scroll half page
C+S + P	Launch menu (profiles)
C+S + Z	Open Zellij in a new tab
C+S+A + P	Command palette
Ctrl + Click	Open link under cursor
Middle-click	Paste primary selection

8. Zellij – multiplexer (prefix `Ctrl + A`)

`chezmoi/private_dot_config/zellij/config.kdl` – prefix remapped `Ctrl+b` → `Ctrl+a` to dodge Vim. Press `Ctrl+A` to enter Normal mode, then:

Ctrl+A →	Action
h/j/k/l	Navigate panes (vim)
n / p	Next / previous tab
c	New pane · x close pane
d	Detach session
[	Scroll mode
Ctrl+A	Lock / unlock

7. WezTerm – LEADER layer (`Ctrl + A`)

`config.leader = Ctrl+A`, 1000 ms timeout. Status bar shows LEADER when armed. `LEADER → Ctrl+A` passes a real `Ctrl+A` through to the inner app (Zellij/tmux).

LEADER →	Action
⧵	/ -` Split horizontal / vertical
z	Zoom pane · x close pane · q close tab
Shift+N	New window · p PaneSelect (asdfghjkl)
f	Search · [copy-mode · Space QuickSelect · e char-select
h / l	Snap window left / right · m maximize · c center
← / →	Snap left / right · Shift+F fullscreen
b	Toggle tab bar · , hide window · Shift+O toggle opacity
u	Attach unix mux domain · o open URL (QuickSelect)
r	resize_pane key-table (modal, see below)
Tab / Shift+Tab	Next / prev workspace ·] next workspace
w	Workspace fuzzy launcher · n new named workspace (prompt)
↑ / ↓	Scroll to prev / next shell prompt
y	Copy last command output
?	Show this cheatsheet (in-terminal)

resize_pane **key-table** (after `LEADER → r`, stays active): `h/j/k/l` or arrows `resize` · `Esc` or `Enter` exit.

WezTerm launch profiles (`C+S + P`)

Default shell = **Zsh**. Menu also offers: Bash · Zellij · Zellij (named "work") · Python REPL (3.12) · Node REPL (24) · btopen.

Aliases: `zj` = fzf session picker · `dev` = `zellij --layout dev` workspace.

9. tmux – fallback multiplexer (prefix `Ctrl + A`)

`chezmoi/dot_tmux.conf` – Zellij is primary; tmux mirrors the prefix.

Ctrl+A ~	Action
h/j/k/l	Select pane (vim)
`\` / -`	Split horizontal / vertical (keeps cwd)
r	Reload config
Ctrl+A	Send literal Ctrl+A to inner app

Windows/panes start at 1; mouse on; 10k scrollbar.

10. Neovim – editor (leader = Space)

chezmoi/private_dot_config/nvim/init.lua .

Key	Action
Space w / Space q	Save / quit
Space e	File explorer (:Ex)
Ctrl + h/j/k/l	Move between windows
J / K *(visual)*	Move selection down / up
Ctrl + d / Ctrl + u	Half-page down / up (centered)
n / N	Next / prev search (centered)
Space p *(visual)*	Paste over selection without yanking
Esc	Clear search highlight

12. Shell – zsh & bash (fzf, atuin, autosuggest)

chezmoi/dot_zshrc / dot_bashrc .

Key	Action
→ / End	Accept whole autosuggestion (zsh)
Ctrl + Space	Accept suggestion (bindkey '^ ') – free now that rofi moved to Super+Space
Ctrl + R	Fuzzy history search (atuin, falls back to fzf)
Ctrl + T	Fuzzy file search (fzf + fd, bat preview)
Alt + C	Fuzzy cd into subdir
↑ / ↓	History prefix-search (zsh history-search-*)
Tab	Menu completion

Conflict & precedence logic

How over-lapping keys are meant to resolve on this host.

Ctrl + A – three layers, intentional chain

WezTerm leader → Zellij prefix → tmux prefix all use Ctrl+A . WezTerm's leader captures it first; LEADER ~ Ctrl+A (and tmux's Ctrl+A Ctrl+A) forward a real Ctrl+A inward. So nesting WezTerm > Zellij still works: tap twice to reach the inner multiplexer. **No fix needed – this is by design.**

Super + +/-/↑/↓ – three claimants, must pick one

PaperWM (focus/scroll columns), Tiling Assistant (snap halves), and GNOME native (maximize/minimize on Up/Down) all want the Super+arrows. With PaperWM

11. lazygit (lg)

chezmoi/private_dot_config/lazygit/config.yml – default keymap, nvim as editor, file-tree view on. Defaults you'll use most:

Key	Action
Space	Stage / unstage file or hunk
c	Commit · C commit with editor
P / p	Push / pull
b	Branches view · Space checkout
Enter	Drill into file / focus panel
x	Open menu of context actions · ? keybinding help
q	Quit

Aliases: lg lazygit · v nvim · g git · gs/gd/gp/gl git status/diff/push/log · ga/gco/gb/gcm/gst add/checkout/branch/commit-m/stash · dc docker compose · zj zellij picker · dev zellij dev layout · wtp wezterm mux · ll/la/lt eza · cat bat · .. / ... up dirs.

13. GNOME Files (Nautilus)

Key	Action
Ctrl + + / Ctrl + - / Ctrl + 0	Zoom icons / reset
Ctrl + 1 / Ctrl + 2	List / grid view
Ctrl + H	Toggle hidden files
F2	Rename · Delete trash

enabled it grabs them first and the snap behaviour is lost. **Logic:** run **one** tiler. Keep PaperWM for scrollable tiling, OR disable PaperWM and let Tiling Assistant own snapping:

```
gnome-extensions disable paperwm@paperwm.github.com #
# or keep PaperWM and disable the snap conflicter:
gnome-extensions disable tiling-assistant@leleat-on-github
```

← →

Ctrl + Space – resolved

Previously contested between zsh autosuggest-accept and an old rofi binding. Rofi now lives on Super+Space (setup-rofi-keybind.sh), so Ctrl+Space is free for the shell. If you still see the launcher fire, an old gnome-launcher scheme is active – re-run

`setup-rofi-keybind.sh` or use `↵ / End` to accept suggestions.

Super + Return – two meanings

PaperWM = new window in column. WezTerm (when focused) = toggle fullscreen. No real clash: PaperWM is a shell-global binding, WezTerm's is app-local and only matters while WezTerm has focus and PaperWM isn't

intercepting. If PaperWM eats it, rebind WezTerm's fullscreen to `F11` (already bound).

Terminal launch – **Super+T** vs **Super+Return**

Current scripts bind `Super+T` → `ptyxis`. The legacy doc lists `Super+Return` → WezTerm. They come from different launcher scripts; only the one you ran is live. Standardize on `Super+T` (current) and drop the legacy launcher to avoid surprise.

Memorize order (frequency tiers)

Tier 1 – every session: `Super+Space` launcher · `C+S+D/E` split · `C+S+H/J/K/L` panes · `C+S+T/W` tab · `C+S+C/V` copy/paste.

Tier 2 – many times a day: `Ctrl+Tab` / `C+S+Tab` tab cycle · `Alt+1..9` jump · `C+S+Enter` zoom · `C+S+X` close

pane · `Super+[ / ]` workspace.

Tier 3 – weekly: `C+S+P` profiles · `C+S+Z` Zellij · `C+S+F` search · `C+S+A+H/J/K/L` resize · `Ctrl + +/-/0` font · `Space e` nvim explorer.

Tier 4 – occasional: `C+S+A+P` palette · `LEADER y` copy last output · `LEADER r` resize mode · `F11` fullscreen · `Super+Q` close window.
